

iStudio United Center by Whitespace, Bangkok – Thailand

May 20th, 2016 by retail design blog

At 323 square meters, iStudio United Center is the second largest iStudio store in Thailand, after the 450 square meter CentralWorld flagship store. In addition to the large Apple product demonstration area located on a glass enclosed bridge situated three stories above the building's entrance lobby, there is a completely separate, large and daylight filled accessory area. Several consultation tables along the window allow customers to interact with iStudio staff while overlooking the bustling Silom street scene below.
